Abstract: These emission guidelines apply to small municipal waste combustors (MWCs) constructed on or before August 30, 1999, that combust greater than 35 tons per day (tpd) but less than 250 tpd of municipal solid waste. The emission guidelines regulate organics (dioxin/furans), metals (cadmium, lead, mercury, and particulate matter), and acid gases (hydrogen chloride, sulfur dioxide, and nitrogen oxides). The emission guidelines require initial reports, semiannual reports, and annual reports. Owners or operators also are required to maintain records of the occurrence and duration of any startup, shutdown, or malfunction in the operation of an affected facility or any period during which the monitoring system is inoperative.

Owners or operators subject to these regulations are required to maintain records of measurements and reports for at least five years.

Form Numbers: None.

Respondents/affected entities: Small municipal waste combustion units.

Respondent's obligation to respond: Mandatory (40 CFR Part 60, Subpart BBBB).

Estimated number of respondents: 23 (total).

Frequency of response: Initially, semiannually and annually.

Total estimated burden: 102,000 hours (per year). Burden is defined at 5 CFR 1320.3(b).

Total estimated cost: \$11,200,000 (per year), includes \$1,040,000 annualized capital or operation & maintenance costs.

Changes in the Estimates: There is an adjustment increase in the respondent burden from the most recently approved ICR. The increase in respondent labor hour is caused by a change in assumption; in this ICR, we assume all existing sources will take some time each year to re-familiarize themselves with the rule requirements. There is also a small increase in the total O&M cost due to rounding of all calculated values to three significant digits.
